Experience

Full Stack .NET Developer   1/2018 -
   Recruit Hub Sports   6/2018

- Worked closely with a small team on creating RecruitHub, a social online platform which eases the process for high school athletes to be discovered by recruiting coaches.
- Implemented the site's AWS S3 upload functionality which comprised of both the Web API controller as well as the back-end database code used to manage user-uploaded content.
- Built the site-wide tagging system, which allows users to add personalized tags to other users and posts on the site, including the ability to make tags public or private.
- Created numerous reusable React components including one which allowed other developers to implement bookmarking functionality within their own components, therefore speeding up their development processes.
- Built several of the site's data entry and editing forms, including validation logic, which consisted of React components, Web API controllers, and services in the site's data access layer.
- Technologies utilized include React 16 and ES6 for the client side, ASP.NET Web API on the server side, and SQL for the back-end.

Re-seller   2012 –
   eBay   2017

- Studied the market for in demand vintage items and video games to identify purchasing sources. Re-seller of DVDs, electronics and musical instruments. Managed inventory, financing, marketing, for proprietary e-commerce business. Actively pursued arbitrage tactics to supply existing inventory.
